Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- (original) A coating composition comprising: a
 (meth)acrylic resin (A) having a hydroxyl group, which is
 obtained by copolymerizing a mixture having for its
 essential components a polycaprolactone-modified
 hydroxyalkyl (meth)acrylate and a different hydroxyl-group
 containing (meth)acrylate, and a polyisocyanate compound
 (B) having a plurality of isocyanate groups; wherein
 - the hydroxyl group of the hydroxyl group-containing (meth)acrylate is a primary hydroxyl group, and the hydroxyl number of the (meth)acrylic resin (A) is 125 to 145.
- (original) The coating composition according to claim 1, wherein the average value of the number of caprolactone repetitive units in the polycaprolactone-modified hydroxyalkyl (meth)acrylate is 1 to 3.
- 3. (currently amended) The coating composition according to claim 1 er-2, wherein the polycaprolactone-modified hydroxyalkyl (meth)acrylate is a polycaprolactone-modified hydroxyalkyl acrylate.

- 4. (currently amended) The coating composition according to any one of claim[[s]] 1 to 3, wherein a monomer having a cyclic backbone is contained in the monomer mixture, and the monomer having a cyclic backbone is contained at 10% by mass or less in the monomer mixture.
- 5. (currently amended) The coating composition according to any one of claim[[s]] 1 to 4, further comprising a lactone polyole (C) having three or more hydroxyl groups.
- 6. (currently amended) The coating composition according to any one of claim[[s]] 1 to 5, wherein the acid number of the (meth)acrylic resin (A) is 30 mg KOH/g or less.
- 7. (currently amended) A coated article comprising: ecating the ecating composition according to any one of claims 1 to 6 onto the surface of a coated material having a surface with a coating including a (meth)acrylic resin (A) having a hydroxyl group, which is obtained by copolymerizing a mixture having for its essential components a polycaprolactone-modified hydroxyalkyl (meth)acrylate and a different hydroxyl-group containing (meth)acrylate, and a polyisocyanate compound (B) having a plurality of isocyanate groups; wherein the hydroxyl group of the hydroxyl group—containing (meth)acrylate is a primary hydroxyl group, and the hydroxyl number of the (meth)acrylic resin (A) is 125 to 145 and curing to form a coated film on the surface of the coated material.
